## (54) FORMATION OF AMORPHOUS SILICON FILM WITH WIDE BAND

(57) Abstract:

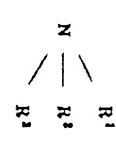

PURPOSE: To form the titled amorphous silicon (a-Si) film with satisfactory control efficiency in the manufacture of an a-Si film by a chemical vapor deposition (CVD) method by adding a specified amount of ammonia (deriv.) to a gaseous starting material.

59078918 A rage 1 of 4

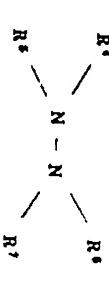

represented by formula III (where n is substrate is placed in a decomposition each or R1WR7 is H, alkyl or aryl. A formula II is used. In the formulae represented by formula I and/or silane] to form an a-Si film with amount of silicon in the gaseous hydrazine (deriv.), and Si is the relation represented by formula IV and/or hydrazine (deriv.) is added to deposit an a-Si film on the substrate. decomposed at about 250W600°C to hydrazine (deriv.) represented by CONSTITUTION: Ammonia (deriv.) the silane by an amount satisfying At this time, said ammonia (deriv.) nitrogen, and the silane is thermally together with an inert gas such as furnace, silane of higher order the ammonia (deriv.) and/or [where N is the amount of nitrogen in introduced into the furnace optionally 2) such as disilane or trisilane is
